2026.09.03 / 听力挖空练习

Scientists task these “unicorns of the sea” to gather crucial Arctic data

共30题。每空填写原文中的1至3个英文单词；留意拼写、单复数及词形。

方括号[01]为题号，P01为原稿段落号。答案集中在末页，练习时请先遮住。

建议先浏览正文，再配合本期视频听写；完成后重听检查，每题1分，满分30分。

姓名：_____ 练习日期：_____ 得分：___ / 30

依据用户提供的字幕原稿制作，未与视频核验。难度参考雅思听力，采用原文挖空形式，非官方模拟试卷。

听写正文 / QUESTIONS 01–30

P01 Narwhals are moonlighting as climate scientists, a 91-year-old pulled off a jaw-dropping, age-defying feat, and an ambulance powered by sunshine. Rise up, sunshine. I'm Coy Wire, 10 Minutes, Big World, let's get you your news.

P02 We begin in London with some uplifting health news that really is a breath of fresh air. A new study suggests the British capital's efforts to cut [01] _____ in recent years may be helping children's lungs grow healthier. Researchers focused on the city's ultra-low emission zone, introduced in central London in 2019.

P03 Drivers of vehicles that don't meet strict [02] _____ have to pay a daily charge, the idea being to put the brakes on tailpipe pollution. The study tracked thousands of kids in London and nearby Luton over several years. Before the clean air zone began, London's kids had higher exposure to traffic pollution and lower average lung function.

P04 But over the four years, between 2018 and 2022, researchers observed a 5% drop in children with clinically impaired lung function in London. In Luton, which didn't have a clean air zone but did make other changes like adding [03] _____ and lowering speed limits, the rate fell 2%. Researchers say this is the first evidence that clean air zones may actually help child development.

P05 That matters because lungs do most of their growing while we're young. If they don't fully develop by [04] _____, the risk rises later in life for conditions including asthma, emphysema, and chronic bronchitis. So, this isn't just about cleaner air today. It could mean healthier lungs for decades.

P06 Now to Nepal, where nearly a week after catastrophic flooding tore through Himalayan communities, the search for the missing is becoming a race against both time and [05] _____. As of this taping, more than 1,200 people have died.

P07 Nearly 4,000 are still missing. Relief organizations are helping more than 80,000 residents who've been [06] _____. The United Nations says some of the hardest hit areas are still unable to even be contacted.

P08 Rescue crews are navigating destroyed roads, unstable mountainsides, while families wait for answers. And in a place where some communities can only be reached from the sky, helicopter crews have become a [07] _____. Our Anderson Cooper caught up with one trailblazing pilot helping lead that mission, Nepal's first female helicopter captain, Captain Priya Adhikari.

P09 It's a small place where so many people went missing.

P10 It's extraordinary that you, I mean, the valley is so close and you are flying through this. It's extraordinary.

P11 Just imagine 20 helicopters flying on that valley. Yeah. Continuously talking with each other. That is actually a little bit of pressure to navigate and to radio at the same time and to know who is doing where. And we going to the same place, evacuating from the same place, like five or six helicopters landing. So we need to talk with each other so [08] _____. Yeah, that is actually.

P12 And now, I mean, you are landing in places where the ground is like [09] _____.

P13 Some of the places you have to be very careful because the helicopter might sink.

P14 It looks from the air, I imagine, to a [10] _____, it looks like, oh, it's solid ground. It's concrete.

P15 No, it's not concrete. This thing that happened, it's bigger than the earthquake we had in 2015. During the earthquake time, it was in different places of Kathmandu or in Nepal. But this is like in a small valley

where so many people have lost life. But the smile I have is for the
[11] _____.

P16 I don't know how they survived. Every time I go inland, I see people around. I'm like waving at them and saying like, you survived. You know, the rescues that I'm doing, people lying down inside my helicopter trying to open their eyes. I smile at them and say like, you survived.

P17 Pop quiz, hot shot. A narwhal's famous tusk is made up of what?

P18 Bone, ivory, keratin, or pixie dust.

P19 If you said ivory, you can toot your own horn.

P20 Narwhal tusks are actually overgrown teeth, did you know? And they can grow up to 10 feet long and contain more than 10 million [12] _____.

P21 Narwhals are known as the unicorns of the sea, but scientists are discovering they may make pretty incredible oceanographers. These elusive arctic whales are helping scientists collect data on the crucial [13] _____ of a remote and hard-to-study corner of the planet, the rugged coast of East Greenland.

P22 Scientists fitted six narwhals with satellite-transmitting sensors and tracked them for three years as they recorded things like water temperature and [14] _____ in remote Greenland fjords. And the data are helping scientists better understand something called atlantification. That's when warmer, saltier Atlantic water pushes farther into Arctic waters.

P23 And that matters because warmer ocean water can [15] _____ the melting of glaciers, which then contributes to rising sea levels. Scientists hope this new data will help them better understand the planet's ice sheet.

P24 If anybody tells you you're too old to chase a big dream, let's introduce them to Gray Beard.

P25 Dale Sanders is 91 years old, and he just became the oldest person ever to complete the entire Appalachian Trail. That's roughly 2,200 miles stretching from Georgia all the way to Maine. He began his [16] _____ last September and finished atop Maine's highest mountain, Mount Katahdin, on Monday.

P26 This wasn't Sanders' first [17] _____ at the trail. There is a huge, huge difference between hiking the trail at 82 years old and at 91. Huge difference. But it is possible, because I'm proving that.

P27 It is a [18] _____. Sanders says he fell 71 times. One fall sent him to the hospital. But Gray Beard kept going. I had a chance to learn more about this trail on my own hike. Check this one out.

P28 It kills you [19] _____ and you're not sleeping well and you're getting bit by bugs. Ripped open feet. You just keep hiking through it.

P29 Hiking like this for six hours would be a [20] _____ for most, but then there are people who hike this thing for six months. That's just mind-blowing.

P30 You see this white blaze, you know you're on track. That white blaze is the iconic marking of the Appalachian Trail, and it guides hikers along this 2,000-mile [21] _____ running from Springer Mountain, Georgia to Maine's Mount Katahdin. I've hiked only a tiny sliver of it today, but I want to know more about the trail and the unique individuals like Matt, trail name Road Soda, who dropped everything to conquer it.

P31 You do start to think, like, why am I still doing this? AT hikers spend most nights in tents, but [22] _____ like this allow them to rest up and reconnect.

P32 You have tramilies out here. It's a trail family and usually just forms by the people that are doing the same miles as you a couple nights in a row. That's kind of how you create friends.

P33 I love this man. You don't see him for a couple days, and then when you see him again, it's like you found your long-lost friend again.

P34 You develop bonds through [23] _____ that's just, it's pretty incredible.

P35 Thru-hikers suffer through freezing cold, searing heat, rain, wind, loneliness, [24] _____, and lots of pain.

P36 It's a lovely shade of lilac.

P37 My knees have hurt pretty much the entire time.

P38 Three out of four Thru-hikers don't even make it to Maine, but those who push through the pain discover joy, pride, and maybe a new [25] _____ on their planet and fellow humans.

P39 There's this, like, really, really strong community.

P40 Everybody's so on your side all the time.

P41 Every memory resurfaces out here because you just have so much time. And you just look out and just see how beautiful our planet is from a [26] _____.

P42 There is hope. Four months after we met him, Road Soda and his tramilies finally reached the top of Mount Katahdin. The end of one journey and perhaps the beginning of another.

P43 As rough as this can be, I don't want to leave this life behind.

P44 Today's story, getting a 10 out of 10, an ambulance that runs on sunshine, connecting health care with communities in Kenya. A team of 23 Dutch students called Solar Team Eindhoven tested a prototype solar-powered [27] _____ named Stella Juva.

P45 The vehicle carries equipment that can include ultrasound machines, portable x-rays, and other basic [28] _____ to rural communities far from health facilities and unreliable electricity. The vehicle drove more than 800 kilometers, about 500 miles, through Kenya. The student team says the prototype navigated rough roads and unpaved roads successfully.

P46 So from testing in Kenya, we gathered that Stella Juva is able to handle off-road terrain and being able to drive up to hundreds of kilometers. What we also gathered is that Stella Juva gathers more energy from the sun than it uses with all its medical equipment on board, meaning that we can deliver [29] _____.

P47 The nearly 3,000 pound vehicle was said to be an early [30] _____ with more testing ahead, but for communities with a lack of access to health care, this solar-powered ambulance could be a link to a brighter future.

P48 Students looked at a problem. Instead of saying somebody should fix that, they started building something. That is what we call a 10 out of 10.

P49 All right, superstars, it is shout-out time.This one goes to Mrs. Devoid at Murray Middle School in Wilmington, North Carolina, who sent this incredible collection of art and cards and messages.

P50 Hi, Dara. Yeah, this one. That's upside down, but that's me. Thank you guys so much for making us a part of your day.

P51 You made our day. Stay curious, stay kind, shine on, sunshine. I'm Coy Wire and we are CNN 10.

参考答案 / ANSWER KEY

2026-09-03 · 共30题。以下为对应空格的原文答案；P编号便于回查中英对照稿。

本练习自评时不区分大小写，拼写与单复数须符合原文。每题1分；此分数不换算为雅思分数。

题号	答案	段落
01	vehicle pollution	P02
02	emission standards	P03
03	bike paths	P04
04	early adulthood	P05
05	terrain	P06
06	displaced	P07
07	lifeline	P08
08	frequently	P11
09	liquid cement	P12
10	novice	P14
11	survivors	P15
12	nerve endings	P20
13	ocean currents	P21
14	salinity	P22
15	accelerate	P23
16	journey	P25
17	attempt	P26
18	dangerous hike	P27
19	physically	P28
20	tall task	P29
21	contiguous footpath	P30
22	hostels	P31
23	shared adversity	P34
24	exhaustion	P35
25	outlook	P38
26	different angle	P41
27	medical clinic	P44
28	diagnostic tools	P45
29	continuous health care	P46
30	demonstration project	P47
